Practicing safety before touching patients

Healthcare simulation is increasingly recognized as a cornerstone of patient safety. By recreating clinical scenarios in a safe and controlled environment, it enables healthcare professionals to develop and refine both technical and non-technical skills without risk to patients. Simulation promotes deliberate practice, fosters interprofessional collaboration, and facilitates structured feedback and error analysis. Beyond its pedagogical value, it plays a strategic role in strengthening a culture of safety, reducing adverse events, and improving the overall quality of care. It is both a learning method and a catalyst for safer healthcare, shaping the next generation of competent and confident professionals.

● 2nd International e-Conference on Training and Simulation for Patient Safety 2025

The Patient Safety 2025 International e-Conference brought together experts, educators, and healthcare professionals from multiple countries to share knowledge and best practices on training and simulation for safer care. Organized under the leadership of Morocco Sim, and with the support of its affiliate societies (ASPiH, GHE, IPSS, SESAM, SESSEP, SOFRASIMS, SPSIM, SSH), the event featured scientific sessions, interactive discussions, and international collaborations, reaffirming the central role of simulation in promoting a global culture of patient safety.

Beyond the exchange of expertise, Patient Safety 2025 emphasized the values of collaboration, innovation, and continuous improvement. The conference served as a dynamic platform to strengthen international networks and inspire new initiatives dedicated to safer, higher-quality healthcare delivery worldwide.

• Agadir Shine Masterclass On Artificial Intelligence and Medical Education

The SHINE Masterclass on AI and Medical Education, held on September 13, 2025, at the Faculty of Medicine and Pharmacy of Agadir, offered a comprehensive exploration of the integration of AI into medical training. Coordinated by Pr. Soufi Mehdi and Pr. Nassik Hicham, and facilitated by Pr. Chakri Imad and Pr. Mouhaoui Mohammed, the program combined conceptual frameworks, generative AI applications, ethical considerations, and practical exercises, with a particular focus on simulation in healthcare. This initiative reflects a strong commitment to innovation, pedagogy, and the advancement of academic excellence in medical education.

Agadir Sim

The Agadir Sim initiative at the Faculty of Medicine and Pharmacy of Agadir is dedicated to advancing simulation-based education through innovative teaching methods. By providing a safe and structured environment for experiential learning, it strengthens clinical skills, and contributes to embedding a culture of quality and patient safety within healthcare training.

• Jadara Healthcare Masterclass by Morocco Sim

The Jadara Healthcare Masterclass, held in Casablanca on September 19–20, brought together scholarship recipients from the Jadara Foundation and students in health sciences for two days of inspiring learning. Organized with the support of Morocco Sim through its Citizen Club, the event combined skills, and community spirit, highlighting the power of education and youth engagement in shaping the future of healthcare. This initiative stands as a strong example of how collaboration and volunteerism can translate into lasting impact for the next generation of healthcare professionals.
